

# Scalar Energy for the World

Vol 1: Nikola Tesla, Father of Scalar Energy

# **SCALAR ENERGY FOR THE WORLD**

**Vol I: Nikola Tesla - Father of Scalar Energy**

# Preface

## Scalar Energy: Understanding the Power and Potential!

Throughout history, many great innovators have been labeled crazy only to later be revealed as geniuses. As time goes on and we learn more about Scalar Energy, inventor Nikola Tesla proves no exception. Considered eccentric at the least and a mad scientist by some, Tesla spent most of his life studying and theorizing about energy in all of its forms, along with its potential applications. Much of his work centered on an alternative to commonly used electromagnetic energy, known as Scalar Energy.

According to Tesla, Scalar Energy, or radiant energy, is a primal force in nature. He surmised that this form of energy when harnessed correctly could have near limitless possibilities. Incredibly enough, Scalar Energy is free and renewable; always available and never in short supply.

During his lifetime, Tesla envisioned the development and construction of what he termed the Wardenclyffe Tower to conduct and distribute Scalar Energy to the public. Had the project taken off, the Wardenclyffe Tower would have been erected in Long Island Sound to provide safe and inexpensive energy to the world. Unfortunately, the venture failed on account of a lack of funding and the Wardenclyffe Tower was subsequently demolished in 1917. Despite the setback, Tesla continued his work with Scalar Energy and eventually perfected his transmission methods in order to power an automobile using the universe's radiant energy and without emissions or gas pollutants!

Nikola Tesla theorized many uses for this incredible energy. And today, we have only begun to truly understand how Scalar Energy could improve our lives. Many believe that its powers could be used for:

- National Defense
- Better Telecommunications
- Sustainable, Clean Power and Lighting
- Health and Wellness Applications
- Disease Cures and Treatments
- And much more

Later in life, Nikola Tesla was quoted as saying that Scalar Energy could be the new driving force behind the world's machinery, derived from the energy that operates the universe itself. Ever-present and in unlimited quantities, this incredible force—when embraced—could have the power to free mankind from so much suffering and toil and “ultimately herald a new Heaven and a new Earth.” In these times of uncertainty, Scalar Energy deserves attention even if only a fraction of what Tesla hypothesized can be realized.

## An Introduction to Scalar Energy

**N**ikola Tesla is one of the greatest geniuses the world has ever known. The discoveries and inventions of Tesla were so far-reaching that they remain unparalleled in the world to this day. Initially, his research focused on alternating, electrical current in contrast to the direct, electrical current proclivity of his day. Tesla convincingly demonstrated the greater efficacy and practicality of alternating current as opposed to direct current, and fortunately his discoveries and inventions were eventually recognized and put into practice. The inventor's thinking was so advanced—so sublime—that most people today still cannot grasp his theories and inventions.

During his research, Tesla realized that two energies exist in the universe: electromagnetic energy and scalar energy. Electromagnetic energy is broadly accepted and utilized; conversely, scalar energy is poorly understood and presently disregarded.

Tesla theorized and experimented with abrupt discharges of electrostatic potentials that subsequently released a new type of energy from the ether of the universe. In so doing, he discovered scalar energy. So profound was this discovery that Tesla abandoned his research regarding alternating, electrical currents and devoted the rest of his life to the pursuit of scalar energy, or—“radiant energy”—as he termed this primal force of nature.

## How it All Began

During the course of his work, Tesla realized that scalar energy possessed alternating concentrations of rarefied and densified pulsations that moved along a single vector. His experiments confirmed that scalar energy could be manifested by the creation of abrupt and powerful, one-way disruptions in the ether itself. He used spark gaps in conjunction with strong magnets that were placed perpendicular to the gap currents in order to quench these currents and to subsequently dissipate the high current arc as soon as it occurred.

This process allowed Tesla to access scalar energy from the immediate environment—or ether—as Tesla frequently referred to the medium of the universe. Succinctly, Tesla used a high voltage DC current power supply in order to achieve a pulsed, current surge of power in one direction. This manifestation was scalar energy.

In 1899, Tesla located to Colorado Springs, Colorado in order to conduct more scalar energy experiments. A laboratory was constructed in conjunction with a tower that Tesla utilized to freely transmit his scalar energy. The experiments proved to be successful as Tesla illuminated lamps at a distance of 25 miles by way of the wireless transmission of scalar energy.

Additionally, Tesla utilized scalar energy in order to produce artificial lightning with bolts measuring over 100 feet in length. In effect, Tesla had created a local, scalar energy environment, causing all of Colorado Springs to now be under the influence of this new and promising energy. It was even reported that butterflies exhibited a blue halo of scalar energy around their wings as they flew within this scalar energy environment. This convinced Tesla that scalar energy was a superior force to that of electricity, and that this preferred energy would serve to vastly improve the welfare of mankind. Emboldened with this discovery, Tesla was now ready to introduce scalar energy to the world.

## The Next Step

About a year after Tesla set up his Colorado Springs Laboratory, he initiated construction for another scalar energy project known as Wardenclyffe Tower, located near Long Island Sound. Always the altruist, Tesla wanted to provide relatively inexpensive and safe energy to the world.

He envisioned the Wardenclyffe Tower as the first of many strategically located scalar energy towers around the world that would provide this amazing energy as a source of power to all. Consumers would simply erect a scalar energy antenna in order to receive a wireless transmission of power from this network of scalar energy towers. Despite Tesla's best efforts however, the Wardenclyffe project failed due to a lack of funding and was subsequently abandoned.

Eventually, the U.S. government deemed the Wardenclyffe Tower a possible threat to national security during World War I. It was feared that spies would use the Wardenclyffe Tower as a landmark for a submarine attack against the homeland. Ultimately, Wardenclyffe Tower was destroyed on July 4, 1917 in order to diffuse that threat.

## Perseverance

Despite these setbacks, Tesla continued unperturbed with his scalar energy research in New York City by miniaturizing his instruments in order to achieve the same results that he experienced at the Colorado Springs and Wardenclyffe laboratories. It is believed that Tesla was able to perfect the transmission of scalar energy to the point where he could power an automobile with the radiant energy of the universe.

Tesla removed the combustion engine of an automobile and replaced it with a sealed engine capable of receiving scalar energy power transmission. He correspondingly invented a scalar energy receiver that consisted of twelve vacuum tubes and an antenna that provided the scalar energy power source for the engine. The receiver was installed inside the dashboard of the retrofitted automobile. In operation, the vehicle performed flawlessly reaching a top speed of 90 MPH without any sign of stress. Furthermore, the scalar energy engine operated without the emission of any gas or pollutant and was accordingly silent in operation. The Tesla car utilized scalar energy as its motive power source—not gasoline.

In his fertile mind, Tesla realized that there were thousands of potential applications of scalar energy in many diverse fields. One potential application was the role of scalar energy in forming a hemispherical dome of protection for a specific region or country against an aerial enemy attack. He knew that this dome of protection afforded by scalar energy would render an incoming missile or attack plane inert.

Tesla's prescient notion was only recently considered by the U.S. government under the "Strategic Defense Initiative" of the Reagan administration.

Tesla also planned to utilize scalar energy as the preferred carrier wave for all telecommunications, thus supplanting the much inferior radio and microwave frequencies of the electromagnetic spectrum used today. Scalar energy signals do not experience entropy and interference as the radio and microwave signals do. Cell phones, satellite dishes, TV, radio, wireless computer networks, and other telecommunications devices would achieve greater clarity of transmission without signal loss by utilizing scalar energy as the carrier wave.

## An End to the Beginning

Upon reflection later in life, Tesla remarked, "This new power (scalar energy) for the driving of the world's machinery will be derived from the energy which operates the universe—the cosmic energy—whose central source for the earth is the sun, and which is everywhere present in unlimited quantities."

Tesla's observation was correct, as it is the Sun of our solar system as well as the stars of the universe that produce a never-ending supply of scalar energy that permeates the universe.

Tesla's discoveries and inventions have provided the seminal environment that was necessary to introduce scalar energy to the world. Now, mankind must acknowledge and embrace scalar energy as one of God the Father's, "greatest creations," as Tesla did during his lifetime. One day, in the near-future, scalar energy will serve to free mankind from so much suffering and toil and ultimately herald, "a new heaven and a new earth." Revelation 21, 1.

## About the Author

Tom Paladino is a scalar energy researcher and has 25 plus years' experience helping people with chronic pathogenic illness.

Tom Paladino's research and work with the scalar energy began during his undergraduate years. He was inspired by various scientists, i.e., Hieronymus, Moray, Priore' and especially Nikola Tesla, as to the existence of an energy that is not of the electromagnetic spectrum. With this inspiration, he pursued a course of independent study in order to better understand and subsequently harness scalar energy.

Scalar energy is also known as prana, chi, radiant energy, zero point energy, qi, orgone, eloptic. After years of experimentation and modification, Tom Paladino has developed a technique using scalar energy that will transmute pathogens quickly and painlessly. This technique facilitates the use of photographs of people who desire to have pathogens transmuted in their bodies.

Tom Paladino developed a treatment process whereby he is able to administer the scalar energy reverse-phase angle harmonic of a pathogen, thereby causing that agent of infection to disassemble or fall apart. Scalar energy operates at the quantum level and is capable of disassembling all types of pathogens thus eliminating the causative agent of disease. Once the causative agent of a pathogenic disease has been eliminated the symptoms associated with that infection decrease or disappear altogether.
